

**REAL HANDS-ON**

# LIPOSUCTION & THREADS FOR SKIN SUPPORT TRAINING

## CHAIRMAN

**PROF. DR. GUSTAVO LEIBASCHOFF**

**REAL Hands-on** practical course

- ✍ Chairman of the International School of Lipoplasty Dr. Pierre Fournier
- ✍ President of the International Union of Lipoplasty
- ✍ Member of the American Academy of Cosmetic Surgery

**Full Immersion**

**Liposuction Training in  
Buenos Aires, Argentina**

**April 25 to 28, 2007**

**Registration Fee \$4,500**

## **WHY IS THIS A REAL HANDS-ON TRAINING?**

The greatest difference between a hands-on liposuction training and a REAL hands-on liposuction training like this one, is that in our course YOU WILL perform the procedure under the direct supervision and guidance of Dr. Gustavo Leibaschoff. It is limited to only a few participants in order to maximize the educational experience.

✍ April 25 to 28, 2007 ✍ Intensive Course ✍ Full Immersion  
✍ Monday through Saturday from 8 a.m. to 5 p.m.

The fundamentals are based on the experience achieved in more than 20 years performing lipoplasties, and how this can help other surgeons perform, better, safer surgeries with better aesthetic results for the patient.

Each surgeon has their own technique, every one of them respectable, what this course wants to demonstrate, is that we need to add certain medical acts to those techniques in order to transform and improve them, making them safer, more effective for the surgeon and the patient.

The realization of the liposculpture is not only a surgical act. There are some elements that help this surgery to be more effective. These are facts accumulated through more than 20 years dedicated exclusively to lipoplasty:

- ? From the right diagnostic, the good indication, through understanding what the patients want and the relation with the aesthetic pathology that they suffer.
- ? The help of non-invasive diagnostic tools for the preparation of a good surgical technique (videocapillaroscopy and echography)
- ? The correct use of the iconography in the medical consultation and in the pre and post op.
- ? The importance of the pre-op physiotherapeutic, cosmetic and medical preparation of the patient.
- ? The placement of the patient on the operating table. The importance of ergonomics for the surgeon and the patient.
- ? The tumescent anesthesia technique, its proper realization. The support of the conscious sedation.
- ? The ergonomics in the realization of the surgery.

. The state of the art in cannulas: Why is a good cannula so important.

? The various techniques for liposculpture depending on the patient's pathology. (Ultrasound, pneumatic assisted tumescent, ultrasonic microlopolisis).

? Rules for a safe liposculpture.

? The immediate and mediate post-op, as important as the surgery itself.

**Through this intensive course will be demonstrated that liposuction requires an integral methodology that is directly related to the aesthetic results.**

## PROGRAM

History of liposuction

Ethical considerations

Educational and clinical qualifications

American Academy Guidelines

Safety in liposuction

Preoperative preparation

Limits of tumescent anesthesia

Risks of systemic anesthesia

Maximum safe doses of liposuction

Lidocaine toxicity and drug interactions

Tumescent formulations

Tumescent infiltration technique

Post-liposuction care:

? Dressings

? Pads

? Physiotherapy post op.

Liposuction by areas:

? Abdomen

? Lateral thighs

? Female hips and back

? Male flanks

? Medial thighs

? Internal knee

? Chin

? Cheeks and jowls

? Buttocks

? Male breast

? Female breast

? Arms

? Calves and ankles

? Dorsal region

Facial rejuvenation

? Facial Lipostructure

? Facial procedures combined with liposculpture

Use of Aptos threads (live hands on)

Obesity and Lipoplasty

? Ultrasonic Liposculpture

Ultrasound Assisted (Pulsed or continuous)

? Physics of UAL

? Efficacy and Safety

? Breast Reduction

? Body Contouring

? Primary, Secondary Procedures

Laser Liposculpture

Vibration cannula

? Pneumatic

? Mechanic

Ancillary Services

Management Post Lipo

Management of Complications

Medico-legal risk management
